

UV WATER PURIFICATION SYSTEMS

FEATURES:

Highly Effective

UV Systems are highly effective against water-borne bacteria like E. coli, parasites and viruses.

Treats water for whole-house!

All the water in the house, hot & cold, is disinfected. Even water in your washrooms, kitchen and laundry!

Chemical-Free! Disinfection is achieved by a safe, natural, non-chemical process that does not alter the composition of the water or affect the taste & odour.

Compact Design!

UV Systems are compact and extremely easy to plumb in, one of the most compact UV systems in the industry.

High Output UV Lamps!

All UV systems incorporate high-output germicidal UV lamps for maximum UV energy.

Efficient Controller!

UV systems are driven by highly efficient microprocessor-controlled ballast. It maintains UV output regardless of voltage or frequency variations. Due to its energy efficient design, it uses as little energy as a single light bulb.

Automatic Lamp Replacement Reminder!

After one year of service, the ballast sets off an audible and visual reminder, notifying you to replace the lamp.

Easy to Maintain!

Regular maintenance is extremely simple and can be performed in minutes without tools.
